Customer-driven tailored products and solutions

Convenient and fast colour matching services

Customer-driven tailored products and solutions

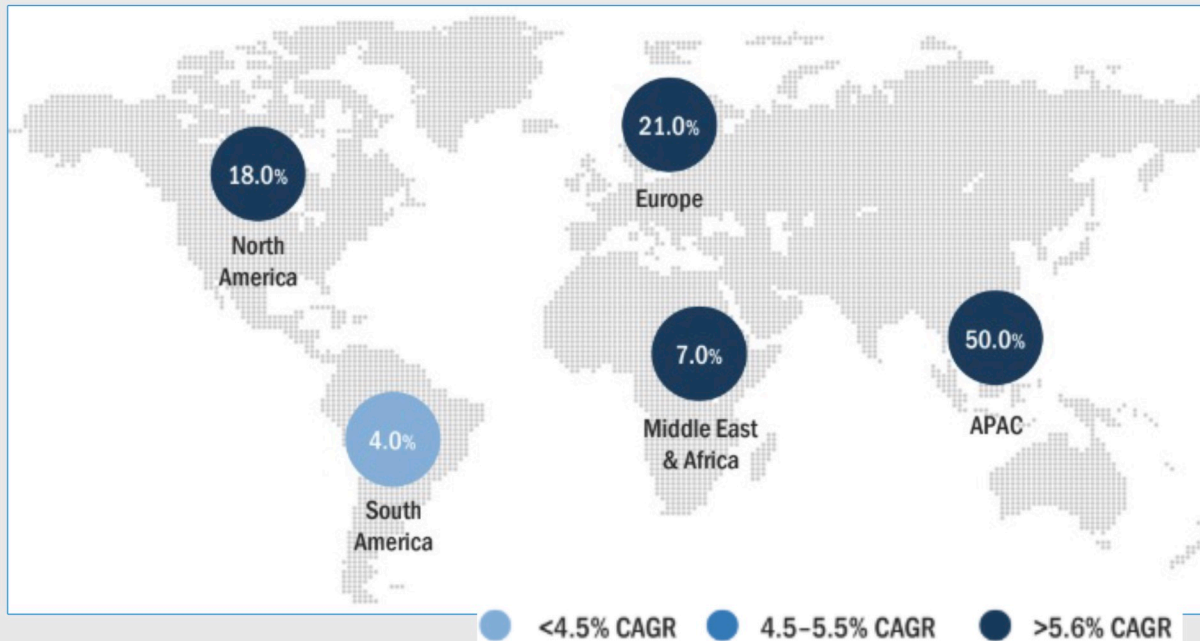

Unmatched Service most inquiry answered within a 1 hour/day

Sustainable colour options for the environment

New Era in Plastic Industry - Tariff Effects!

Source: Secondary Research, Primary Interviews, and Market&Markets Analysis

Recent tariffs are expected to **increase color concentrate prices** by up to **30-40%**. Here's why: Color concentrates are made from two main ingredients: Pigment and Resin.

While resin remains widely available and affordable, **pigments are specialized chemicals** that accounts for majority of the cost of colorants. Only 18% of pigment production is made in the US and 65-70% of production is titan.

70-75% of all pigment producer across all over the world located in **China, Vietnam, India and European countries**. These countries are now facing tariffs anywhere from: **40% to 145%**.

To sum up, colorant prices are expected to rise significantly, increasing costs for plastic manufacturers across the United States.

Mine Colours offers safety net for your Supply Chain!

Thanks to our global presence, Mine Colours is not affected by the tariffs in terms of raw materials!

Türkiye is facing considerably lower tariffs (only 10% as of today compared to 6% previously last year), this situation further enhances our competitive pricing in today's changing market.

Unbeatable Prices:

15–20% more affordable than industry average

Fast Color Matching Service:

Colour matching any sample, within 1 week after RFQ

Fast Fulfilment for Low Volume Quantities:

Orders under 250 lbs shipped within 1-2 weeks

Priority Fulfilment for Blanket Orders:

For blanket orders over 2,000 lbs, we warehouse your next order free of charge and dispatch it within 1 week.
